# PDP-10 System Serial Numbers

Please send updates and corrections to Michael Thompson m_thompson@ids.net

KA10   serial numbers started at 1 and ended with 187.
KI10   serial numbers started at 500 and ended around 800.
KL10   serial numbers started at 1025 and ended around 2000; they resumed at 2101 and ended around 3160 or 3500.
KS10   serial numbers started at 4097 and ended around 4826.

# These Systems still exist as of 28-Sep-04

**KA**

Rumors of a machine at Stacken Computer Society in Stockholm, Sweden
See below.

Mark Crispin mrc@CAC.Washington.EDU
I used to own the former Stanford AI Lab KA10, and still have its front panel and meter.  It was fried when I got it, and the remainder was scrapped; however, its BBN pager was used in a KA Tenex system in Sweden for a while.

        Paul Repacholi prep@prep.synonet.com
        Originally from University of Western Australia.
        Intact except for the terminal line IO cab. Including RP06 and 4 RP07s. Some one has offed the voltage
        monitor boards, the tiny ones in the IO cab, but there is a bypass for them :) I've booted the FE, and it is fine.
        It is in bits due to a house fire at the moment.

2740    2065 (Upgraded from 2060)
        Fornax Computer Corp. Trenton, NJ
        Eric Smith eric@brouhaha.com
        http://starfish.osfn.org/rcs/DECsystem/2065/

2777    "AIDA" The machine is a 2060 I believe (but some here now claims it's a -2065). The machine has three
        RP06, one RP07, one TU77. 1.5 MW memory. This machine have had problems with both the cache and the
        power supply to the memory. The machine was officially taken off DEC service in 1990.
        Owned by Uppsala University, but are in the care of the computer club there.

3159    "CARMEN" The machine started out as a 2040S, later upgraded to a 2060 (there are also some claims that
        this is a -2065). It has one RP06, one RP07 and one TU77. 1..5 MW memory. No known problems with this
        machine. It was also taken off service in 1990, but run until 1993 or 1994 (with AIDAs system), when we lost
        more than half our floorspace.
        Owned by Uppsala University, but are in the care of the computer club there.

3526    2065, KL10-E, built 4-OCT-84
3545    Michael Ross, mike@corestore.org, http://www.corestore.org/2065.htm
        1x NIA20, 2x MG20, 1x DTE20, 1x RH20
        The 11/40 FEP contains 1x RH11, 1x DM11
        The system has serial number MRR3545 with the 45 crossed out and overwritten with 26.

4553 KS10
Robert Gordon University, Aberdeen Scotland
Mike Ross mross666@hotmail.com
http://www.corestore.org/DEC20.htm
The last DEC 36-bit machine which was working in the UK. It ran the administration system at Robert Gordon University in Aberdeen, Scotland. It was switched off in approx. '94. I don't know the serial number offhand, but I'll try to find out. I collected the complete system - KS, 2xTU45, 4xRP06, all disk packs and tapes (TOPS-20 V4), documentation etc. I had to get rid of three of the four RP06 drives to a maintenance company due to cash flow and storage space issues.

| 46 | TOPS-10 | Penn State University | University Park, PA | KA10 | |
|----|---------|-----------------------|---------------------|------|---|

Purchased in 1968/1969 time frame for use with EIA-680 Analog Computer for hybrid computation pair.  The facility was the Hybrid Computation Lab which was part of the Electrical Engineering Department at the Penn State University Park campus.  The system was located in the EE West building.  The Hybrid Computer Lab was removed from the EE Department and became a College-wide facility named the Engineering Computer Lab which supported general computer op0erations in the College.  At one time there was the DEC-10, DEC-2020, VAX 11/780, VAX 11/785, VAX 8550, Harris H800, and two IBM 4341 systems along with multiple VS3100 Workstations and assorted microVax systems.  When the centralized computing facility was phased out (CEDCC formed) in the 1995/1996 timeframe the DEC-10 and all other systems were scraped.

"Our machine was used primarily for running NMR quantum-mechanical calculations, and also for some laboratory near-realtime instrumentation ["human realtime", not physical system realtime], as well as program development and document editing for a ~7-person research group. It did very well with that sort of load."

The system configuration was:
fast registers
memory management [loseg/hiseg]
floating point
byte-pointer hardware
paper tape reader/punch
KSR-35 console TTY
3 ea. MB-10 memories, 16 Kword each, slow (1.67 us?)
4 ea. TU-55 DECtape drives (one tape per)
RD-10(?), the 500 Kword Burroughs swapping drum, which we actually used for both swapping and file storage.
1 ea. RH-10(?), the controller/formatter you needed for the disk
1 ea. DF-10 "channel" (needed for the disk controller's DMA).

Doug Quebbeman dhquebbeman@theestopinalgroup.com

In September 1974, IUPUI (Indiana University - Purdue University at Indianapolis) had a KI-1070, serial number not known at this time. The system configuration was:

```
LT35A Console
PC04/PC05 Paper Tape Reader/Punch
32Kw MF10A memory
64Kw MF10G memory
BA10 Unit Record Control
    -> CR10D Card Reader
    -> LP10C Line Printer
    -> IBM 1627 Drum Plotter
TM10A MagTape Controller
    -> Four 729 VI Tape Drives
TD10 DECTape Conroller
    -> Four TU56 DECTape Drives
DF10 Data Channel
    -> RP10C/ Three RP03 Disks
DL10 Interface Channel
    -> PDP-11
        -> Two DH11's
    -> PDP-11
        -> One DS11
    -> PDP-11
        ➔  Another DS11 (RJE into IU Computing Network)
```

# KL10

Alan Greig a.greig@virgin.net
This DEC2060 belonged to Dundee College of Technology "Dundee Tech" (now Abertay University). That's the one the "Introduction to the DECSYSTEM-20" booklet in the web archives was written for.  Started life as a 2040 in 1977. Turned off 1990 or 1991 (hard to recall now exactly as we had several extended periods of downtime after the machine was taken off  support

which we were able to work around later. I worked there in a junior position in the early 80s and returned in a senior position in 1992. I tended to pop in from time to time and perform basic TOPS-20 housekeeping after most of their TOPS-20 people had moved on and new staff tended to do VMS or Unix.

University of Dundee, half a mile away, had a KL-10 (1115) and a KS-10 (4607) both running TOPS-10. I can no longer recall the serial numbers but have contacted their ex admins. Apparently they may still have the UK written X25 front end code used on JANET before it morphed into an IP network. Arrick Wilkinson was the former director there but back in the early 70s he ran the Glasgow University Nuclear Physics KA-10 under TOPS-10.
